

YOU'RE INVITED TO A

WESTERN DROUGHT RESILIENCE WORKSHOP

Join us as we share preliminary climate predictions for annual forage production in regions of the western US over the next three decades. After short presentations on climate, forage, and ranching contexts, we will begin a conversation about how our findings might be most useful to your current and future work. Together, we'll devise a strategy for next steps in a collaboration to foster resilience on western rangelands.

Gain new knowledge about future impacts of drought on forage resources across the West and an invitation to collaborate in ways to share these findings.

DAY: AUGUST 12TH, 2020
TIME: 10AM-1PM MDT
